forklift

INTERFACE

HOW TO MIGRATE

UPDATE

Our new endpoints have some big advantages!
You can keep track of the execution and results with JSON Response and they are way faster!

Example old endpoint:
https://<username>:<password>@www.forklift-international.com/de/verwaltung/cgi/bilderimport.cgi

Use the host **importapi.forklift-international.com**
instead of our classic webserver

Leave the path information out (de/verwaltung/cgi/)
The target base filename stays the same

Note that the **new URL always ends in .php**
(instead of the old .cgi)

If you like to use the new REST API-functions, please refer to the API docs.
